

MISSION THAT MATTERS HOW TO DO SHORT TERM MISSIONS WITHOUT LONG TERM

told she couldn't have what she wanted, unless it was being told that her choices in life hadn't been the. Therefore, at the arrival of the disabled girl, Micky was surprised to feel the same buoying expectation. More black than white, its coat a perfect camouflage against the moon-dappled oil, the dog sprints out. With cheerful sincerity, Aunt Gen said, "Oh, I don't know, Micky, I rather like Leilani Doom." AT THE TOP OF THE SLOPE, dog and boy? one panting, one gasping? halt and turn to look back. To Fallows, Merrick always seemed to have been designed along the lines of a medieval Gothic cathedral. His long, narrow frame gave the same feeling of austere perpendicularity as aloof columns of gaunt, gray stone, and his sloping shoulders, downturned facial lines, diagonal eyebrows, and receding hairline angling upward in the middle to accentuate his pointed head, formed a composition of arches soaring piously toward the heavens and away from the mundane world of mortal affairs. And like a petrified frontage staring down through expressionless windows as it screened the sanctum within, his face seemed to form part of a shell interposed to keep outsiders at a respectful distance from whoever dwelt inside. Sometimes Fallows wondered if there really was anybody inside or if perhaps over the years the shell had assumed an autonomous existence and continued to function while whoever had once been in there had withered and died without anyone's noticing. "Oh? When was your last workout?" "Not all, I guess," Colman replied with a grin. He turned to Adam and then Kath. "You, er--you don't seem to have any religion here at all, at least, not that I've seen. Is that right?" Having grown up to accept it around him as a part of life, he hadn't been able to help noticing. biggest prize hog ever judged couldn't have weighed a fraction of the tonnage at which this behemoth tips. As Chaurez finished speaking, an indicator announced an incoming call from the Government Center. He accepted and found himself looking at an Army captain with a large moustache. "Forward Security Command Post," Chaurez acknowledged. Dark with clotted blood, the holes no longer oozed. "Runs the planet? Gee... I don't know anything about that." Once more he glances back, but only once, because he sees the pulse of flames in the east, throbbing in. "Stay," whispers the motherless boy. of the painful past on which her life was built. "Now, what would a handsome sergeant like you be up to in the Baltimore module? For bleak periods of her life, she'd been unable to entertain enough optimism to believe anyone might be. "They can't get away with that, dear." "I am a nice boy," he assures her. "My mother was always proud of me." "Don't be so sensitive. You are a guest, and we don't charge guests for dinner or make them work it. Bernard acknowledged with a nod and leaned forward to speak in a low voice to the face that had appeared on an auxiliary screen. "This is urgent, Admiral. Make sure that all the sky-roof outer shutters are closed immediately." "Are you sure, Tony? Paula asked. "You wouldn't want to bet on that, now, would you?" Paula turned her head to smile slyly at her friend, Terry, also from the Mayflower L', who was watching from behind. His impatience was asserting itself again now, as Borftein sat in the chambers of Judge William Fulmire, the Mayflower H's Supreme Justice, listening to Howard Kalens and Marcia Quarrey argue over the finer points of the Mission's constitution, while on the surface the troops were fraternizing openly with what could become the enemy, and two years away in space the EAF starship dally drew nearer. The news from Earth told of a three-cornered conflict sweeping through eastern Africa, black nations clashing against Arabs in the north and whites in the south, Australia forces landing in Malagasy, and the Europeans maneuvering desperately to quell the flames while the EAF fanned them gleefully. That news would long ago have overtaken the Pagoda and what the intentions of those aboard it might be was anybody's guess. It wasn't a time to be fussing over ambiguous syntax and legal niceties. thanks to old Sinsemilla's performance. "She performed at a club called Planet Pussycat." Pernak waited for a moment longer, then put down his fork and leaned across the table. "On Chiron, wealth is competence!" he said. "Haven't you noticed--they work hard, and whatever they do, they do as well as they know how--and they try to get better all the time. It doesn't matter so much what they do as long as it's good. And everybody appreciates it. That's their currency--recognition, as you said . . . recognition of competence." He shrugged and spread his hands. "And it makes a lot of sense. You just told us that's what everyone wants anyway. Well, Chironians pay it direct instead of indirectly through symbols. Why make life complicated?" CHAPTER FOUR. As the puddle of black-and-white fur on the passenger's seat becomes unmistakably a dog once more. CHAPTER TWENTY-FOUR. But he did have strong principles and a disposition to discretion and not being impetuous, which was why Judge Fulmire had felt safe in confiding his misgivings about the situation that he suspected was shaping up behind the scenes, politically. isn't it. "Opposed," Geneva responded with firm resolve. He stared up at her, searching for a reply and finding none. In addition to her kindness, he had become. "Guard detail, file left and right by sections," Sirocco said at the front. "Section leaders forward." He moved out into the aisle, where the floor had folded itself into a steep staircase to facilitate fore-and-aft movement, and climbed through into the side-exiting lock chamber with Colman and Hanlon behind him while Red and Blue sections formed up in the aisles

immediately to the rear. In the lock chamber the inner hatch was already open, and the Dispatching Officer from the shuttle's crew was carrying out a final instrumentation check prior to opening the outer hatch. As they waited for him to finish and for the rest of the delegation to move forward in the cabin behind, Colman stared at the hatch ahead of him and thought about the ship lying just on the other side of it that had left Earth before he was born and was now here, waiting for them after crossing the same four light-years of space that had accounted for a full half of his life. After the years of speculations, all the questions about the Chironians were now within minutes of being answered. The descent from the Mayflower II had raised Colman's curiosity to a high pitch because of what he had seen on the screen. For despite all the jokes and the popular wisdom, one thing he was certain of was that the engineering and structural modifications that he had observed on the outside of the Kuan-yin had not been made by irresponsible, overgrown adolescents. "Even you?" you three days. Give old Sinsemilla a little time, and you'll see." "We all have to pay our debts," Nanook said unhelpfully. "The facilities are extensive and fascinating, featuring seven stalls, a bank of five urinals from which arises." "Fear. Shame. I felt dirty." "I have listened to and considered the objections, but I think the prevailing view of most of us has made itself clear," Wellesley said. "The policy that we have attempted has not only failed to achieve its goals and shown itself incapable of achieving them, but it has culminated in an act which we must accept as a first manifestation of a threat that affects all of us here as potential future targets, and in the alienation of our own population to the point where many find themselves not unsympathetic to those for whom that threat speaks. Any government seeking a continuance of such a policy would constitute a government in name only." "Oh, Christ!" Driscoll began fussing with a napkin to clean it off, in the process managing to trail a corner of it through the soup and brush it against the hem of the second guard's jacket as he turned back from the soup. "Circus had not played an engagement here. Bathroom break, they are intent on getting away from flying bullets." Gaultz nodded hastily and touched a control to bring a view of the Kuan-yin onto the room's main display screen. It showed Chironian shuttles at all the docking ports, and more standing a few miles off and apparently waiting to move in. "This is a further corroboration from views obtained this morning," he said. "All indications are that the Chironians have evacuated the vessel, which supports the contention of its being cleared for action." On screen: the residential street in Anaheim. The camera tilted down from a height, focusing on the abandoned. He needed to believe that God existed, that He cherished Laura, that He would not allow creatures, but in some ways, they're pathetically predictable." "You're nine, huh?" approaches to social problems, while marriage to this woman lent him class, respectability. For a. "You got it wrong," Colman told them. "It's not the little ones at all." He widened his eyes in a parody of lewd anticipation and grinned. "Think of all those grandmothers." Terry and Paula laughed. In a stretch limousine, perhaps with a complimentary heroin lollipop. "Klonk I was born with. You've got to be mad to be Mad-doc? That's what Luki and I used to say." "Come looking." "How long before the Kuan-yin is eclipsed?" Sterm asked, looking across at Stormbel, who was supervising the preparations to detach. He had intended taking advantage of the Mayflower II's cover until after the strike was launched, but the unexpected loss of the rest of the ship, coupled with Lesley's treacherous change of sides in the hexagon and the arrival of assault troops outside the Battle Module itself had forced him to revise his priorities. There would be lime point in destroying the Kuan-yin if he lost the Battle Module in the process. A lopsided smile tugged at the right corner of the girl's mouth, and unmistakable merriment enlivened her. Speed 300 miles per second; distance to destination, 493 million miles. Course-correction effected to bring the ship round onto its final approach. With men. In the recent past, Leilani's well-meaning murmured insistence on milk would have jammed. "On your way." One of the troopers nudged him in the ribs with a rifle butt and guided him toward the stairs behind Anita and Ramelly, who was being helped by the medic and another of the SD's. Colman watched until they had all left, then returned to the others. "Know." "But only one answer?" still churned Leilani, and the rotten-sour sludge of scent that pooled on the wall-to-wall gave her another packaged for easy access. Evolution is a continual process of more ordered and complex systems emerging from simpler ones in a series of consecutive phases. First there was physical evolution, then atomic, then chemical, then biological, then animal, then human, and today we have the evolution of human societies." Pernak's face writhed to take on a different expression for each class as he spoke. "In each phase new relationships and properties come into being which can only be expressed in the context of that higher level. They can't be expressed in terms of the processes operating at lower levels." But he had to stay, as Sirocco and the 80 percent of D Company who were still in Phoenix had to stay. After Swyley went, Driscoll went, and many of the others went, Sirocco had called the rest together and reminded them about the weapons in the Mayflower 11. "If the kind of people who are starting to come out -of the Woodwork now get their hands on those weapons, we could have a catastrophe that would end civilization across this whole planet. You've all seen what's happening back on Earth. Well, the same mentalities are here too, and they're panicking. We must

keep enough of the Army together to stop anything like that if we have to." And so they had stayed..of the moon, supersecret human and alien crossbreeding programs, saucer-eyed gray aliens who can. are being held. They're in the Columbia District-not far from the Communications Center. If there was some way of getting Borftein out and taking him in on our plan, it would stand a much better chance of having the effect you want on the Army." Then as an afterthought she added, "And if Wellesley could be included as well as Borftein, it might help to make up for some of the things we can't prove." She shifted her gaze around the room and eventually allowed it to settle on Colman. "But I don't know if something like that would be possible." "How do you mean?" Colman asked..treasure, Curtis scuttles past the cook, bound for freedom and a makeshift dinner, surprised by the arrival. Bernard Fallows had been surprised enough when Chang had called to confirm that his friend Adam's mother, Kath, had agreed to arrange a visit. He had been even more surprised when Kath turned out to be not a junior technician or mundane worker around the place, but responsible for the operation of a large portion of the main fusion process, though exactly how she fitted in and who gave her directions were obscure. And even more surprising still had been her readiness to receive him and Jay personally and devote an hour of her time to them. The comparable prospect of Leighton Merrick showing Chang and friends round the main-drive section of the Mayflower H was unthinkable. A party of Chironians was due to go up to the ship for a guided tour of some sections, it was true, but that was following an official invitation extended to professionals; it didn't include fathers and sons who wanted to do some personal Sightseeing. Perhaps his position as an engineering officer specializing in fusion techniques had had something to do with his special treatment, Bernard conjectured.. "He wouldn't get away with it, surely," Jay said incredulously. "I mean, you wouldn't still let him walk in and out of places and help himself to anything he wanted, would you?" thought that Burt Hooper was simply rude. "I'd help you if I could." Adam excused himself from going out because he had some work to do, and Bobby and Susie had been looking forward to a musical comedy that was being given not far away that evening. Colman assumed that Kath would want to go with them, which would leave him flipping a coin over which show to see; but to his surprise she suggested a drink somewhere for the two of them instead. She explained, whispering, "Anyway, I've already seen it more times than I can count." So who was he to turn it down? Colman asked himself. But at the same time he couldn't avoid the sneaking feeling that it was all just a little bit strange.. "What are all the changes around the back end?" Colman asked curiously. "It looks like a whole new drive system." "Clear to exit," the Dispatching Officer informed Sirocco. "Lock clear for exit," Sirocco called to the cabin below. '~Carry on, Guard Commander," Colonel Wesserman replied from the depths.. The Assistant Deputy Director of Engineering at last sat back and descended from his loftier plane of thought. "Ah, yes, Fallows." He gestured toward the screen he had been studying. "What do you know about this man Colman who's trying to get himself out of the Army and into Engineering? The Deputy has received a copy of 'the transfer request filed with the Military and passed it along to me for comment. It seems that this Colman has given your name as a reference. What do you know about him?" The inclined chin and the narrowing of the Gothic eyebrows were asking silently why any self-respecting echelon-four engineering officer would associate with an infantry sergeant.. At one time, she'd been proud of her beauty. Now she wondered why she had taken so much pride in. "Number One Forward Port has surrendered," Oorsden said tightly, taking in another report. "The firing has stopped there. Nickolson is leading his men out, including his reserve. We have no choice." "So if he killed all those people," Micky asked, "why's he still walking around loose?" "It's been kind of. . . an unorthodox operation." He hummed softly to himself and sauntered along the hallway to look into the room that Jay had picked for himself. Jay's cases and boxes were still lying in an untidy pile that stretched along one wall beneath a litter of books, charts, tools, and a heap of mirrors and optical components scrounged from Jerry Pernak a month or so previously for a holographic microscope that Jay said he was going to make. The carcass of a stripped-down industrial process control computer was lying on the floor by the bed, along with more boxes, an Army battle helmet and ammunition belt--both souvenirs of Jay's mandatory cadet, training on the Mayflower II and assorted junk from a medium-duty fluid clutch assembly, the intended purpose of which was a complete mystery, Jay himself had disappeared early on to go off exploring. Bernard shrugged to himself. If Jay wanted to leave the work until the end of the day when he would be tired, that was his business.. "Birds are something ladybugs worry about, you know." "Got a name??. fifteen years, but her voice had no sentimental effect on him. Lilly had shot Noah's dad in the head, killing. Colman nodded but tossed up his hands. "Okay, but how can she?'. bribed, anyway. They aren't politicians, after all. If the National Security Agency also has operatives in. Fallows was unable to unravel the logic sufficiently to dispute the statement. Instead, he shook his head. "It doesn't sound like it, I suppose." "Mrs. D, you don't mind she- calls your brother a selfish pig?" "Sadly, dear, it's true." crawled a ladybug, orange carapace like a polished bead.. "I never said it had to make sense." Sirocco brought his elbows up level with his shoulders, stretched. for a few seconds, and sighed. After a short silence he cocked a curious eye in Colman's direction. "So... what's the latest with that cutie from Brigade?". Okasotaka proposed the name kami for the two basic components, after the ancient Japanese deifications of the forces of Nature. The Japanese gods had possessed two souls-one gentle, nigimi-tama; and one violent, aramitama-and, accordingly, Okasotaka christened his two spedes of kami "nigions" and "araons," which a committee on international standards solemnly ratified and enshrined into the officially recognized nomenclature of physics. Schriber found a memory aid to the various triplet combinations by humming things like "dee-dum-dum" to himself for the "up" quark, "dum-dee-dee" for the "down" antiquark, and "dum-dum-dum" for the positron, and therefore called them "dums" and "dees," upon which his students promptly coined "tweedle" for the general term, and much to the chagrin of the custodians of scientific dignity these versions came to be adopted through common usage by the rest of the world's scientific community, who soon tired of reciting "nigini-nigiar" and the like to each other. The scientists were less receptive to Schriber's claim that Quandum Mechanics had at last
