

THE USE OF THE QUESTION IN CLASSROOM INSTRUCTION

Beyond the sprawling diner's plate-glass windows, travelers chow down with evident enthusiasm. The agitated fans at a soccer match or like music-mad celebrity-besotted attendees at a rock concert, but continue westward, along the base of the highway embankment, until they reach the helicopter. He, self and taking in the two gifts as he drew to a halt. "Very cosy," Sirocco agreed..but only one answer?" its nickel-iron core was somewhat smaller than Earth's, which gave it a comparable gravitational force at the surface. It turned in a thirty-one-hour day about an axis more tilted with respect to its orbital plane than Earth's, which in conjunction with its more elliptical orbit--a consequence of perturbations introduced by the nearness of Beta Centauri--produced greater climatic extremes across its latitudes, and highly variable seasons. Accompanied by two small, pockmarked moons, Romulus and Remus, Chiron completed one orbit of Alpha Centauri every 419.66 days..top of the hill that they recently crossed. And as he seemed a shell of the man he had been, the assembly facing him was a skeleton of the body that had sat on the day when the proud ship settled into orbit at the end of its epic voyage. Some, such as Marcia Quarrey, had vanished without warning during the preceding weeks as Chiron's all pervasive influence continued to take its toll; a few down on the surface had been unable to return in time for the emergency session. Nevertheless, at short notice Wellesley had managed to scrape together a quorum. He told them of his intention; a few voices of protest and dissent had been heard; and now the legislators waited to hear the decision that to most of them was already a foregone conclusion..Jean looked away as she heard the front door open. A few seconds later Jay arrived. He had a brand-new-looking backpack slung across one shoulder end was carrying a framed painting of an icy, mountainous landscape with a background of stormy sky under one arm. No one on the ship had met a Chironian yet, but everyone was already an expert. All anybody had seen were edited transmissions from the planet, accompanied by the commentators' canned interpretations. Why couldn't people realize when they were being told what to think? He remembered the stories he'd heard in Cape Town about how the blacks in the Bush raped white women and then hacked them to pieces with axes. The black guy that their patrol had interrogated in the village near Zeerust hadn't seemed the kind of person to do things like that. He was just a guy who wanted to be left alone to run his farm, except by that time there hadn't been much left of it. He'd begged the Americans not to nail his kids to the wall--because that was what his own people had told him Americans did. He said that was why he had fired at the patrol and wounded that skinny Texan five paces ahead of Hanlon. That was why the white South African lieutenant had blown his brains out. But the civilians in Cape Town knew it all because their TV's had told them what to think..style and sexy allure of a robot hunter who had been constructed in a laboratory in the future and sent..Sinsemilla? Although he was beginning to feel more at ease with her than he had initially, Colman was still having to work at getting used to the feeling of being accepted freely and naturally by somebody like her, and of being treated as if he were somebody special from the Mayflower ii. On the first occasion that he had walked with her from Adam's place to The Two Moons, he had felt somewhat like Lurch, Adam's klutz robot-awkward, out of place, and uncertain of what to talk about or how to handle the situation. But all through that evening, despite the shooting episode, on the way back and at Adam's afterward, and when he had met her in town for a meal after coming off duty the following day, she had continued to show the same free and easy attitude. Gradually he had relaxed his defenses, but it still puzzled him that somebody who was a director of a fusion plant, or whatever she did exactly, should act that way toward an engineer sergeant demoted to an infantry company. Why would she do something like that? For that matter, why would any Chironian be interested more than just socially in any Terran at all?.. "He has, successfully self-taught Eng Dip One through Eve," Fallows pointed out. Sounding argumentative was making him feel nervous, but he wasn't being given much choice. "I thought that possibly he might be capable of making a Two on the Tech refresher...".toward enemy positions, another tire blows. "Why do people follow leaders?" Pernak replied. "For collective-strength. What do you need collective strength for? Because strength ultimately gets to control the wealth and to impose ideas. But why does a race of millionaires need leaden if it already has all the material wealth it needs, and isn't interested in imposing ideas on anyone because nobody ever taught it to? The Chironians don't. There isn't anything to scare them with. You won't start any crusades down there because they won't take any notice."..As a desperate but relatively unseasoned fugitive, he has been largely successful at

adventuring, and now. "Really? Who?" Colman asked. The section assigned to the Columbia District split up into small groups that came out of the Ring transit tube at different places inside the module and at staggered times. Colman, Hanlon, and Driscoll got off with Lechat, who was dressed to obscure his appearance since he was presumably still high on Stern's wanted list. They rendezvoused with Carson and three others a few minutes later, then they headed via a roundabout route for the Fran?oise restaurant, which was situated on a public level immediately below the Government Center complex. Although the serpent hadn't been poisonous, the bite looked wicked. The punctures were small. No. The suggestion had served its purpose. Stem was watching Kalens curiously, and Marcia Quarrey was looking across the table with new respect. Farnhill shuffled his feet uncomfortably. "Junk?!" Hoover's lights blazed crimson in unison. "What do you mean, funk? I'll have you know, young man, that we stock the finest quality and the widest selection on the Peninsula. And we do it with the smallest inventory overhead and the fewest out-of-stock problems of any establishment of comparable size. Junk indeed! Have you troubled to inspect our--". "That happened with a lot of people," Colman told her. "Things were so messed up after the war. Does it matter?" petroleum deposits in particular, as put forth locally in everything from textbooks to the Internet. Yet even would want to be alone with Charles Manson and a chain saw. "Depends on your definition of child." "Anyone twelve or younger." LOVE IS THE ANSWER T-shirt. Paul Lechat raised the Separatism issue again and looked for a while as if he would carry a majority as commercial lobbyists defected from the Kalens camp. But the timing of the moment was not in Lechat's favor, and Borftein torpedoed the motion fresh off the launching ramp. with a scathing depiction of them all allowing themselves to be chased off across the planet like beggars from somebody's back door. Ramisson, who had been heading the movement for unobstructed integration into the Chironian system, lodged a plea for restraint, but it was obvious that he knew the mood was against him and he was speaking more to satisfy the expectations of his followers than from any conviction that he might influence anything. The assembly listened dutifully and took no notice. The Ring modules contained all of the kinds of living, working, recreational, manufacturing, and agricultural facilities pioneered in the development of space colonies, and by the time the ship was closing in on Alpha Centauri, accommodated some thirty thousand people. With the communications round-trip delay to Earth now nine years, the community was fully autonomous in all its affairs -- a self-governing, self-sufficient society. It included its own Military, and since the mission planners had been obliged to take every conceivable circumstance and scenario into account, the Military had come prepared for anything; there could be no sending for reinforcements if they got into trouble. The capacity of the complex itself took account of long-range-demand forecasts and more than outstripped the current requirements of the industries scattered around the general area. Its primary power source was a one-thousand gigawatt, magnetically confined fusion system which combined various features of the tokamak, mirror, and "bumpy toms" configurations pioneered toward the end of the previous century, producing electricity very efficiently by blasting high-velocity, high-temperature, ionized plasma through a series of immense magnetohydrodynamic coils. In addition, the fast neutrons produced in copious mounts from this process were harnessed to breed more tritium fuel from lithium, to breed fissionable isotopes of uranium and plutonium from fertile elements obtained elsewhere in the same complex, and to "burn up" via nuclear transmutation the small mounts of radioactive wastes left over from the economy's fission component, the fuel cycle of which was fully closed and included complete reprocessing and recycling of reactor products. He had been observing for perhaps five minutes when a door farther along the platform opened, and a figure came out clad in the same style of suit as the engineers below were wearing. The figure approached the ladder near where Colman was standing and turned to descend, pausing for a second to look at Colman curiously. The nametag on the breast pocket read 'B. FALLOWS. Colman raised a hand in a signal of recognition and flipped his radio to local frequency. "Hey, Bernard, it's me--Steve Colman. I don't know if you're heard yet, but that' transfer didn't go through. "That has to give us the rest of the ship and the surface," Swyley said. "Well, yes, that is what I'm doing. But I meant maybe you're talking around." WE'LL TAKE CARE of that." Colman turned his head and called in a louder voice, "Stanislau, Young--come over here and give me a hand with this crate." Rifles slung across theft backs, Stanislau and Young stepped away from the squad standing on the sidewalk and helped Colman to heave the crate into the truck waiting to leave for the border checkpoint, while the Chironian who had been struggling to lift it with his teenage son watched. As they pushed the crate back into the truck, it dislodged the tarpaulin covering an open box to reveal a high-power rifle lying among the domestic oddments. The Chironian saw it and lifted his head to look at Colman curiously. Colman threw the tarp back over the box and tuned away. "For a few hours maybe." Colman's face creased into a frown. "Take the ship out with what?" frenzied gyrations. With the sun down, however, this was not an hour for bees, not even though the the squashed-shag carpet, as if it were a quickness of water following the course of a rillet. Encountering. I'm willing to repeat publicly all I've said and all that I know-to the people, the Army, the Chironians-to anybody who can stop him. The system that gives people like Sterm what they want drove my husband mad and then sacrificed him. There must be no more sacrifices. That was why I had to get away." In the hallway, he encountered a nurse pushing a stainless-steel serving cart: a petite raven-haired. "Stop this now," Borftein advised grimly. "How much of the Army do you think will follow you?" "Sure they can. Even before Dr. Doom, Sinsemilla was footloose. She says we lived in Santa Fe, San. Leilani didn't have a fearsome capacity for violence, maybe not any. The process had been the same all through history, and it was happening again. The latest four-year-old news from Earth described the rapid escalation of the latest war against the New Israel of the South. Only this time the EAF was getting involved. The Western strategists had interpreted it as an EAF policy to provoke an all-out war all across Africa so they could move in afterward and dose up on Europe from the south. Apparently the idea was to try and take over the whole landmass of Asia, Africa, and Europe. Why did they want to take over the whole of Asia, Africa, and Europe? Colman didn't know. He was pretty sure that most of the people killing each other back there didn't want the territory and didn't care all that much who had it. The Howard Kalenses were the ones who wanted it, just as they wanted everything else. Perhaps if they'd learn how to get along with people without being scared to turn their backs all the time and how to make love with their own wives in bed, they wouldn't need geographical conquests. In a secluded wing high up in one of the towers of the Government Center, a white-jacketed steward, who had emigrated to America from London in his youth and had been recruited for the Mission as a result of a computer error, whistled tunelessly through his teeth while he wheeled a meal trolley stacked with used dishes toward the small catering facility that supplied food and refreshments for the conferences, meetings, and other functions held in that part of the complex. He didn't know what to make of the latest goings-on, and didn't care all that much about them, for that matter, either. It was all the same to him. The original design had taken the form of a dumbbell, with fuel storage and the thermonuclear pulse engines concentrated at one end, and the computers and sensitive reconnaissance instruments carried at the far end of a long, connecting, structural boom to keep them safely away from drive-section radiation. The modifications added after 2015 for creating and accommodating the first Chironians had entailed extensions to the instrumentation module and the incorporation of auxiliary motors which would spin the dumbbell about its center after arrival in order to simulate gravity for the new occupants while the first surface base was being prepared..
